

Highlights

- We stress-test citation assignment under answer-phrase insertion in three open-weight RAG models.
- Cited-other documents receive 9.1%, 21.6%, and 17.8% of recovered-statement citations in Llama, Qwen, and Gemma.
- Document position and source retention differ across conditions, limiting causal comparisons.
- ConflictBank answer-citation co-occurrence does not identify the source that caused a claim.
- Corrected probes trail simple baselines; component scaling corrects no generation-level citation errors.
